

RIPmate Plus

Productivity enhancement liberates standalone RIP users.

Accelerate your productivity beyond that of a standalone RIP with ECRM's RIPmate Plus. RIPmate Plus contains software enhancements that enable remote control of the RIPing process. Any network workstation can now be used to view, roam and zoom (in or out) on any part of the rasterized image for soft proofing, as well as hold, release or re-direct a job without going to the physical RIP station. RIPmate Plus can be an invaluable enhancement to the workflow and quality assurance process of any print operation, at a very attractive price point.

UPGRADE

RIPmate Plus is also available as a software enhancement package for standalone ECRM and Harlequin RIP users.

RIPmate Plus Bundle Special

ECRM's new RIPmate Plus Bundle Special offers the latest v8.1 software pre-staged on a new Dell PC platform, at one low price. Factory preloading of all necessary software including the OS with all current Microsoft patches and the RIP software permits an "out-of-the-box" installation eliminating or reducing on-site technical expertise.

RIPmate Plus is also available as a "software only" package as well.

Additional Bonuses

- Complimentary WebEx install and training session (8 hours maximum)
- 10% discount on available RIP options such as TrapMate In-RIP trapping, CIPMate, ProofMate color managed inkjet proofer drivers, and ScreenMate (HDS FM screening)
- RIP Options discount applies only at time of RIP bundle purchase
